

High income countries have increased GDP by 3 Trillion USD

Unemployment with Advanced Education has risen in low income groups by 8-10%

Income Disparity has remained constant amongst countries of all Income Groups

High Income Countries have seen positive migration every decade

THE WORLD ECONOMY & MIGRATION

With a fast changing global economy, some notable patterns are emerging throughout the socioeconomic world, with cross country migration being one of them.

The first graph shows that while the world is enjoying high economic growth, it is the high income countries that have more than doubled their GDP. This GDP growth hasn't translated to improving the percentage of people living below the median income with all Income Groups having a constant 10-15% population below median income.

Unemployment rates show that High and Upper Middle income countries have had stable unemployment, however Low income countries have seen a sharp rise of 10% unemployment for the highly educated over two decades.

This coupled with stagnant/worsening economic conditions have compelled those amongst the lower income group countries to migrate, particularly to the high income countries for the past 3 decades.
